III	Required Supplementary Information	6
IV	Notes to the Required Schedules	10
Appendix A	Actuarial Assumptions	11

## Section I - Introduction

---

The Governmental Accounting Standards Board issued Statement No. 67 (GASB 67), “Financial Reporting for Pension Plans,” in June 2012. GASB 67’s effective date is for plan years beginning after June 15, 2013. This report, prepared as of June 30, 2021 (the Measurement Date), presents information to assist PERA in meeting the requirements of GASB 67. Much of the material provided in this report is based on the data, assumptions and results of the annual actuarial valuation of the New Mexico Judicial Retirement Fund (the Fund) as of June 30, 2020. The June 30, 2020 liabilities were rolled forward to produce the June 30, 2021 total pension liability (TPL) used in this report. The actuarial assumptions used are included in Appendix A. Based on the provisions of GASB 67, the Judicial Retirement Fund is a single-employer defined benefit pension plan.

Among the assumptions needed for the liability calculation is a Single Equivalent Interest Rate (SEIR). To determine the SEIR, the fiduciary net position (FNP) must be projected into the future for as long as there are anticipated benefits payable under the plan’s provision applicable to the membership and beneficiaries of the Plan on the Measurement Date. If the FNP is projected to not be depleted at any point in the future, which is the current result for the Fund, the long term expected rate of return on plan investments expected to be used to finance the benefit payments may be used as the SEIR.

If, however, in a future year, the FNP is projected to be depleted, the SEIR is determined as the single rate that will generate a present value of benefit payments equal to the sum of the present value determined by discounting all projected benefit payments through the date of depletion by the long term expected rate of return, and the present value determined by discounting those benefits after the date of depletion by a 20-year tax-exempt municipal bond (rating AA/Aa or higher) rate. The rate used, if necessary, for this purpose is the monthly average of the Bond Buyers General Obligation 20-year Municipal Bond Index Rate (formerly published monthly by the Board of Governors of the Federal Reserve System).

To the best of our knowledge, this supplemental report is complete and accurate. It relies on much of the information contained in the annual actuarial valuations of the fund. The annual valuation reports should be distributed along with this report to interested parties. The actuarial calculations were performed by qualified actuaries according to generally accepted actuarial procedures and methods. The calculations are based on the current provisions of the System, and on actuarial assumptions that are internally consistent and individually reasonable based on the actual experience of the System. Further, the calculations were prepared in accordance with the principles of practice prescribed by the Actuarial Standards Board and, in our opinion, meet the requirements of GASB 67. The undersigned are members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

## Section I - Introduction

---

In order to prepare the results in this report, we have utilized appropriate actuarial models that were developed for this purpose. These models use assumptions about future contingent events along with recognized actuarial approaches to develop the needed results.

We note that as we are preparing this report, the world is in the midst of a pandemic. We have considered available information but do not believe that there is yet sufficient data to warrant the modification of any of our assumptions. We will continue to monitor the situation and advise in the future of any adjustments that we believe would be appropriate.

The sections that follow provide the results of all the necessary calculations, presented in the order laid out in GASB 67 for note disclosure and Required Supplementary Information (RSI).

Respectfully Submitted,

## Section II – Financial Statement Notes

The material presented herein will follow the order presented in GASB 67. Paragraph numbers are provided for ease of reference.

The information required by paragraphs 30(a)(1)-(3) are to be supplied by PERA.

The data required by paragraph 30(a)(4) regarding the Plan membership were furnished by PERA. The following table summarizes the membership of the Plan as of June 30, 2020, the date of the valuation used to determine the June 30, 2021 total pension liability.

### Membership

Category	Number
Inactive Members or Their Beneficiaries Currently Receiving Benefits	193
Inactive Members Entitled to But Not Yet Receiving Benefits	27
Active Members	123
Total	343

The information required by paragraphs 30(a)(5)-(6) as well as paragraphs 30(b)-(f) are to be supplied by PERA. The information required by paragraph 31(a) is provided in the following table. The Net Pension Liability is equal to the Total Pension Liability minus the Plan's Net Position. That result as of June 30, 2021 is presented in the table below.

Calculation of the Net Pension Liability (NPL) as of Fiscal Year Ending June 30, 2021	
Total Pension Liability	\$173,895,087
Plan's Fiduciary Net Position	<u>101,226,570</u>
Net Pension Liability	\$72,668,517
Ratio of Fiduciary Net Position to Total Pension Liability	58.21%

## Section II – Financial Statement Notes

---

Paragraph 31(b) requires information regarding the actuarial assumptions used to measure the TPL. The actuarial assumptions utilized in developing the TPL are those contained in Appendix A of this report. Please refer to the actuarial valuation report for the summary of the benefits provided through the Fund.

### Long-Term Expected Rate of Return

The long-term expected rate of return on pension plan investments was determined using statistical analysis in which best-estimate ranges of expected future real rates of return (expected returns, net of pension plan investment expense and inflation) are developed for each major asset class. These ranges are combined to produce the long-term expected rate of return by weighting the expected future real rates of return by the target asset allocation percentage and by adding expected inflation. The target asset allocation and best estimates of arithmetic real rates of return for each major asset class, as provided by the System's investment consultant in 2020 based on the System's revised investment policy, are summarized in the following table:

Asset Class	Target Allocation	Long-Term Expected Real Rate of Return
Global Equity	35.5%	5.9%
Risk Reduction & Mitigation	19.5	1.0
Credit Oriented Fixed Income	15.0	4.2
Real Assets to include Real Estate Equity	20.0	6.0
Multi Risk Allocation	<u>10.0</u>	6.4
Total	100.0%	

*Discount rate.* The discount rate used to measure the total pension liability for the Fund is 7.25%. The projection of cash flows used to determine the discount rate assumed that future contributions will be made in accordance with statutory rates. Future contributions include an annual distribution of \$1,200,000 until the Fund achieves 100% funded status, as provided by Senate Bill 122. On this basis, the pension plan's fiduciary net position together with the expected future contributions are sufficient to provide all projected future benefit payments of current plan members as determined in accordance with GASB Statement No. 67. Therefore, a 7.25% assumed long-term expected rate of return on pension plan investments was applied to all periods of projected benefit payments to determine the total pension liability.

## Section II – Financial Statement Notes

---

The FNP projections are based upon the Fund's financial status on the measurement date, the indicated set of methods and assumptions, and the requirements of GASB 67. As such, the FNP projections are not reflective of the cash flows and asset accumulations that would occur on an ongoing plan basis, reflecting the impact of future members. Therefore, the results of this test do not necessarily indicate whether or not the fund will actually run out of money, the financial condition of the Fund, or the Fund's ability to make benefit payments in future years.

Paragraph 31(b)(1)(g) requires disclosure of the sensitivity of the net pension liability to changes in the discount rate. The following presents the net pension liability of the Fund, calculated using the discount rate of 7.25 percent, as well as what the Fund's net pension liability would be if it were calculated using a discount rate that is 1-percentage-point lower (6.25 percent) or 1-percentage-point higher (8.25 percent) than the current rate:

	1% Increase (8.25%)	Current Discount Rate (7.25%)	1% Decrease (6.25%)
Total pension liability	\$159,540,496	\$173,895,087	\$190,659,545
Plan net position	<u>101,226,570</u>	<u>101,226,570</u>	<u>101,226,570</u>
Net Pension Liability	\$58,313,926	\$72,668,517	\$89,432,975

June 30, 2020 is the actuarial valuation date upon which the TPL is based (paragraph 31(c)). The TPL was calculated as of June 30, 2020 using the economic and mortality assumptions adopted by the Board as well as demographic assumptions resulting from the experience study for the four-year period ending June 30, 2019. Standard update procedures were used to roll forward the liabilities to the June 30, 2021 Measurement Date.

## **Section III – Required Supplementary Information**

---

There are several tables of Required Supplementary Information (RSI) that are required to be included in the Fund’s financial statements. The tables for paragraphs 32(a)-(c) are provided on the following pages. The end of year total pension liability (TPL) was determined by “rolling-forward.” This method determines the end of year amount by assuming that there were no changes in the TPL during the year due to actual experience being different than expected for that plan year. Impact of changes to the assumptions and benefit terms are appropriately measured and provided in the supplementary information. The money-weighted rates of return required for paragraph 32(d) are to be determined by PERA’s investment professionals.

Actuarial assumptions are contained in Appendix A of this report.

## Section III – Required Supplementary Information

### SCHEDULE OF CHANGES IN THE NET PENSION LIABILITY GASB 67 Paragraph 32(a)

	2014	2015	2016	2017	2018	2019	2020	2021
<b>Total pension liability</b>								
Service Cost	3,792,564	3,344,275	3,244,941	5,491,704	4,488,035	4,282,426	5,285,772	6,280,946

## Section IV: Notes to Required Schedules

---

### Summary of Actuarial Methods and Assumptions for Valuation

Actuarial valuation date	June 30, 2020
Actuarial cost method	Entry Age Normal
Amortization method	Level Percentage of Pay, Open
Amortization period	Solved for based on statutory rates
Asset valuation method	4 Year Smoothed Market Value
Actuarial Assumptions:	
Investment rate of return	7.25% annual rate, net of investment expense, SEIR 7.25%
Payroll Growth	3.00%
Projected salary increases	3.25%
Includes inflation at	2.50%

In addition, under paragraph 34, the following should be noted regarding the RSI:

The actuarial assumptions utilized in developing the TPL are those contained in Appendix A of this report. The SEIR rate changed from 4.34% to 7.25%.

There were no changes to the benefit provisions which impact the measurements provided in this supplemental report.

## Appendix A: Actuarial Assumptions

### Actuarial Assumptions Used for Determining the Total Pension Liability (TPL)

#### Economic Assumptions (effective with June 30, 2018 valuation)

**Assumed Rate of Investment Return.** 7.25%, net of investment expenses.

**Discount Rate for Determining the TPL:** 7.25%.

**20-Year Municipal Bond Rate as of Measurement Date:** N/A.

**Price Inflation.** 2.50% per annum, compounded annually.

**Salary Increases (effective with June 30, 2020 valuation).** Annual salaries of active members are assumed to increase at an annual rate of 3.25% per year.

**Administrative Expenses.** 0.50% of payroll.

#### Demographic Assumptions

**Rates of Retirement (effective with the June 30, 2020 valuation).** These rates are used to measure the probability of an eligible judge retiring at the indicated ages.

Sample Ages	Percent Retiring During Year Following Attainment of Indicated Ages
50-54	15%
55-61	20
62	25
63-74	20
75+	100

A judge was assumed to be eligible for retirement after satisfying the following conditions:

	Pre 7/2005 Hire Date	Post 7/2005 Hire Date
<b>Early Retirement Eligibility</b>	Age 50 with 18 years of service	N/A
<b>Normal Retirement Eligibility</b>	Age 60 with 15 years of service; or age 65 with 5 years of service	Age 55 with 16 years of service; or age 65 with 5 years of service

**Rates of Disability.** Beginning with the June 30, 2008 valuation, there are assumed to be no future disabled retirees.

## Appendix A: Actuarial Assumptions

### Rates of Separation from Active Membership (effective with June 30, 2017 valuation).

The rates are used to measure probabilities of active members terminating that status for a reason other than disability or death. The rates do not apply to judges who are eligible for retirement.

Sample Ages	Percent of Active Judges Separating Within the Next Year
20-34	1.00 %
37	2.00
42	2.50
47	3.00
52	3.50
57	4.00
62	4.50
65	4.50

**Mortality Assumption (effective with June 30, 2018 valuation).** RPH-2014 Blue Collar mortality table with female ages set forward one year. Future improvement in mortality rates is assumed using 60% of the MP-2017 projection scale generationally.

Sample Mortality Rates (Base Rates)								
Pre-Commencement			Post-Commencement			Post-Commencement		
Age	Male	Female	Age	Male	Female	Age	Male	Female
25	0.000733	0.000244	35	0.001793	0.001169	80	0.053460	0.042932
30	0.000717	0.000317	40	0.002156	0.001611	85	0.088524	0.072752
35	0.000797	0.000417	45	0.003275	0.002671	90	0.146859	0.125111
40	0.000958	0.000598	50	0.005604	0.004235	95	0.223428	0.197901
45	0.001455	0.001013	55	0.007342	0.005165	100	0.313988	0.291040
50	0.002490	0.001685	60	0.009893	0.006890	105	Disabled retirees use the same assumption as healthy lives.	
55	0.004071	0.002510	65	0.014089	0.010092	110		
60	0.006743	0.003606	70	0.021101	0.016038	115		
65	0.011612	0.005456	75	0.032952	0.026199	120		

### Miscellaneous and Technical Assumptions

<b>Marriage Assumption:</b>	All members are assumed to be married for purposes of death-in-service benefits. Male spouses are assumed to be three years older than female spouses. At retirement 86% of members are assumed to be married for purposes of valuing death after retirement benefits.
<b>Pay Increase Timing:</b>	Beginning of (Fiscal) year. This is equivalent to assuming that reported pays represent amounts paid to members during the year ended on the valuation date.
<b>Decrement Timing:</b>	Decrements of all types are assumed to occur at the beginning of the year.
<b>Eligibility Testing:</b>	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
<b>Decrement Relativity:</b>	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
<b>Decrement Operation:</b>	Neither disability nor withdrawal decrements operate during retirement eligibility.
<b>Incidence of Contributions:</b>	Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report and the actual payroll payable at the time contributions are made.
<b>Benefit Service:</b>	Exact fractional service is used to determine the amount of benefit payable.
